                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
The invention relates to the use of atonal-associated nucleic acid amino acid sequence, or any of its homologues or orthologues as therapeutic agents for the treatment of deafness, partial hearing lyestibular effects due to damage or loss of inner hair cells, osteoarthritis and abnormal cell proliferation. The invention also encompasses methods of screening for compounds which affect the expression of an atonal-associated nucleic acid sequence in an anim
                                                                                                                                          Therapeutic use of atonal-associated nucleic acids or amino acids, or any of its homologs or orthologs, for the treatment of e.g. deafness, osteoarthritis and abnormal cell proliferation -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and a transgenic animal in which an allele of a native atonal-associated gene is replaced by a heterologous nucleic acid sequence, thus inactivating the atonal-associated allele. The nucleic acids or proteins may be used in a method of treating an animal for hearing impairment, joint disease, balance disorders, abnormal cell proliferation, or other disease related to loss of a functional atonal-associated nucleic acid or protein. They may particularly be used to treat an animal with a deficiency in cerebellar granule neurons or their precursors, and may also be used in promoting mechanoreceptive cell growth and generating hair cells. The present sequence represents an atonal-associated nucleic acid sequence referred to in the invention.

Note: The present sequence is not shown in the specification, but
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 861 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        No.:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                obtained from GenBank.

The present sequence is that of cDNA encoding the murine CC basic helix-loop-helix transcription factor neurogenin 3 (ngn3), CC a gene which is required for the specification of the early CC endocrine precursor in the pancreatic epithelium and which is CC down-regulated once endocrine differentiation begins. The invention CC provides a claimed method for differentiation stem cells (especially cembryonic, adult or somatic stem cells and primordial germ cells) into insulin-producing cells. This involves culturing stem cells in CC a suitable medium and activating at least one gene involved in CC beta-cell differentiation. Preferred genes including Pdx1, Pax4, CC Pax6 and ngn3 (see ABV75967-70). Gene activation comprises the CC delivery of the gene into stem cells can be transplanted into cells. The insulin-producing cells can be transplanted into CC syndrome and metabolic disorders with impaired glucose levels such CC as diabetes, hyperglycaemia and impaired glucose tolerance (claimed). The cells can also be used to identify compounds which CC into the case of idifferentiated beta-cells can be used to beta-cell cifferentiated beta-cells can be used to study the toxic and other effects of exogenous compounds on beta-cell cinto expression vector pACCMV.pLpA under the control of the cytomegalovirus promoter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mouse; transcription factor; neurogenin 3; ngn3; stem cell; differentiation; beta-cell; insulin; diabetes; hyperglycaemia; glucose intolerance; antidiabetic; hypoglycaemic; gene therapy;

The method comprising introducing into a mammalian cell a nucleic acid molecule encoding an islet transcription factor for expression of the islet transcription factor in the cell and for production of islet cell phenotype in the cell. The islet transcription factor is a neuroendocrine basic helix-loop-helix (bHLH) transcription factor. The method is useful for treating type 2 diabetes mellitus and for replacing beta cells lost to autoimmune destruction in individuals with type 1 diabetes. The method is useful in cell therapy. The present sequence is murine neurogenin 3 manual form
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Producing a mammalian islet cell for treating diabetes mellitus comprises introducing into a mammalian cell a nucleic acid molecule encoding neuroendocrine basic helix-loop-helix transcription factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 1860
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 3; Page 89-90; 108pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mus
                                                                               protein sequences, and includes an antibody recognising the Ngn3 protein. Also included in the invention is a method for identifying an islet cell precursor, the method involves analysing a cell for the expression of the Ngn3 gene product, where detection of the product is indicative of an islet cell precursor. The Ngn3 DNA sequence is useful as a diagnostic reagent for detecting (in a subject) a predisposition to a defect in pancreatic islet cell function or formation associated with a defect in Ngn3 activity. The Ngn3 protein is useful for identifying beta-cell precursor cells expressing Ngn3, and to alter cellular differentiation in culture in vivo to produce new beta-cells to treat patients with diabetes mellitus. The present sequence represents the murine Ngn3 genomic DNA
                                                                                                                                                                                                                                        The human neurogenin 3 Ngn3 DNA sequence AAC61089 encodes the Ngn3 protein AAY85617. The Ngn3 gene is located at chromosome position 10q22.1-22.2. The invention relates to the human Ngn3 nucleotide a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Neurogenin 3; Ngn3; cellular differentiation; diabetes mellitus; islet cell precursor identification; mouse; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  amino acid sequence, or any of its homologues or orthologues as therapeutic agents for the treatment of deafness, partial hearing loss, vestibular effects due to damage or loss of inner hair cells, osteoarthritis and abnormal cell proliferation. The invention also encompasses methods of screening for compounds which affect the expression of an atonal-associated nucleic acid sequence in an animal, and a transgenic animal in which an allele of a native atonal-associated gene is replaced by a heterologous nucleic acid sequence, thus inactivating the atonal-associated allele. The nucleic acids or proteins may be used in a method of treating an animal for hearing impairment, joint disease, balance disorders, abnormal cell proliferation, or other disease related to loss of a functional atonal-associated nucleic acid or protein. They may particularly be used to treat an animal with a deficiency in cerebellar granule neurons or their precursors, and may lead to treat an animal with a second to treat the second to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         No.:

This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligomuclectides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The methor is used: (i) for diagnosis and/or prognosis of side effects of the two chasses is defected of a wide range of diseases, e.g. cancer, disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Oligonucleotide
                                                                                                                                                                                                                                                                                                                                        Claim 12; 56pp + Sequence Listing; 56pp; German.
                                                                                                                                                                                                                                                                                                                                                                                            Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA -

This invention describes a novel method for determining the degree of cc methylation of a particular cytosine in a motif 5'-CpG-3', present in a cc genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. CC member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers CC and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory cof the central termining the degree of method allows the cutypes and for investigating cell differentiation. The method allows the cutypes and for investigating cell differentiation. The method allows the cutypes and for investigating cell differentiation of cell or tissue types and for investigating cell differentiation of cell or tissue types and for investigating cell differentiation of cell or tissue the method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA -

                                                                                                                                                            methylation of a particular cytosine in a motif 5'-CpG-3', present in a cytosine (c) but not methylated C, to uracil, then part of the genomic cytosine (c) but not methylated C, to uracil, then part of the genomic cytosine (c) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one contains the target C is amplified acid (PNA) oligomers and the degree of hybridiseation to both classes is determined from the calculated. The method classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory contents etc., particularly by detecting mutations or single nucleotide cypes and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.
                                                               Sequence 592
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2002-371829/40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Olek A,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              01-SEP-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel method for determining the degree of comethylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one comber, of oligonuclectides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.

AB013410-AB054121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in

                                                                                                                                                                                                                                                                                                                                                             The invention relates to the use of atonal-associated nucleic acid or CC amino acid sequence, or any of its homologues or orthologues as CC therapeutic agents for the treatment of deafness, partial hearing loss, CC vestibular effects due to damage or loss of inner hair cells, CC osteoarthritis and abnormal cell proliferation. The invention also CC encompasses methods of screening for compounds which affect the CC expression of an atonal-associated nucleic acid sequence in an animal, CC and a transgenic animal in which an allele of a native atonal-associated CC gene is replaced by a heterologous nucleic acid sequence, thus CC inactivating the atonal-associated allele. The nucleic acids or proteins CC may be used in a method of treating an animal for hearing impairment, CC joint disease, balance disorders, abnormal cell proliferation, or other CC grotein. They may particularly be used to treat an animal with a CC deficiency in cerebellar granule neuronal atonal-associated mucleic acid or promoting mechanoreceptive cell growth and generating CC also be used in promoting mechanoreceptive cell growth and generating CC hair cells. The present sequence represents an atonal-associated nucleic acid sequence referred to in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Atonal; homologue; orthologue; atonal-associated protein; deafness; hearing impairment; vestibular effect; balance disorder; osteoarthritis; cellular proliferation; cerebellar granule neuron; gene therapy;

                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 1, Application US/09817360

Patent No. US20020015696A1

GENERAL IMPORMATION:
APPLICANT: German, Michael S.
APPLICANT: German, Michael S.
APPLICANT: Lin, Joseph
TITLE OF INVENTION: PRODUCTION OF PANCREATIC ISLET CELLS
TITLE OF INVENTION: AND DELIVERY OF INSULIN
FILE REFERENCE: UCSF-129CIP
CURRENT APPLICATION UNMBER: US/09/817,360
CURRENT FILING DATE: 2001-03-20
PRIOR APPLICATION NUMBER: 09/535,145
PRIOR APPLICATION NUMBER: 60/128,180
PRIOR FILING DATE: 1099-04-06

PRIOR FILING DATE: 1999-04-06
NUMBER OF SEQ ID NOS: 19
SOFTWARE: FastSEQ for Windows Version
SEQ ID NO 1
LENGTH: 5340
TYPE: DNA
ORGANISM: Homo Sapiens
US-09-817-360-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 1
US-09-817-360-1
```

```
APPLICANT: ZOGHBI, HUDA Y.
APPLICANT: YANG, QI
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPEUTIC USE OF A
TITLE OF INVENTION: ATONAL ASSOCIATED SEQUENCE FOR DEAFNESS,
TITLE OF INVENTION: OSTEOARTHRITIS, AND ABNORMAL CELL PROLIFERATION
FILE REFERENCE: P01899US4
CURRENT APPLICATION NUMBER: US/10/004,717
CURRENT FILING DATE: 2002-08-16
PRIOR APPLICATION NUMBER: 09/585,645
PRIOR APPLICATION NUMBER: 60/176,993
PRIOR APPLICATION NUMBER: 60/137,060
PRIOR FILING DATE: 2000-01-19
